EDUCATION

Simon Fraser University
Bachelor of Science in Computing Science
• GPA: 4.13/4.33

Burnaby, BC
Sep. 2021 – Present

TECHNICAL SKILLS

Languages: C/C++, GLSL/OpenSL, HTML/CSS, Java, JavaScript, MATLAB, Powershell, Python, SQL
Frameworks & Libraries: Flask, JUnit, Matplotlib, Node.js, NumPy, pandas, React
Developer Tools: Git, HTTP Protocols, IntelliJ, REST APIs, Visual Studio, VS Code, UML Diagrams

EXPERIENCE

Software Test Engineer Co-op | *Python, Testing, Scripting*
OSI Maritime Systems

Jan. 2025 – Aug. 2025
Burnaby, BC

- Initiated and developed a meeting summarizer application utilizing a large language model (see Projects section)
- Automated organization of JIRA data by integrating Python and JavaScript with JIRA's REST API
- Updated and configured PowerShell deployment scripts, working with developers and lab staff to test and streamline the equipment updating process
- Developed Python scripts for regression testing of maritime navigation software, contributing to the identification and resolution of 10+ major and minor bugs
- Collaborated with teammate to debug an in-house application, playing a key role in identifying root causes and contributing to the fixes that resolved the issues

CalcConnect Peer Tutor | *Communication, Teaching*
Simon Fraser University

Sep. 2022 – Aug. 2024, Sep. 2025 – Present
Burnaby, BC

- Fostered a supportive and encouraging learning environment that boosted student confidence and engagement in mathematics, complimented for professionalism that interested students into becoming peer tutors in future
- Guided peers through practice problems and assignments, emphasizing logical reasoning and step-by-step solutions

PROJECTS

AI Meeting Summarizer | *React, Flask, Ollama, Prompt Engineering, Fine-tuning*

Jul. 2025 – Aug. 2025

- Designed and built a web-based application prototype that generates summarized PDF reports from meeting transcripts, leveraging Ollama and local LLMs
- Applied prompt engineering and fine-tuning techniques to optimize model accuracy, efficiency, and reliability
- Collaborated with a team of 3 peers, coordinating task distribution to deliver a working prototype ahead of deadline and present to company executives
- Project was selected by executives for official adoption and future development, recognizing its business value and impact

TCP Simulator | *HTTP Protocols, TCP, UDP, Python*

Oct. 2024

- Developed a Python-based simulator that establishes a TCP-like connection over UDP, collaborating with a partner on design and implementation
- Implemented core TCP mechanisms including three-way handshake, Go-Back-N protocol, packet sequencing, acknowledgments, flow control, and termination

Processor Simulator | *C++, Processing, OOP, Git*

Mar. 2024

- Implemented a complex simulation of a computer processor that handles different types of low-level computer instructions using a five-stage pipeline
- Applied object-oriented programming principles to develop modular code, resulting in a successful project submission with top evaluation marks
- Collaborated with two other developers, utilizing git for version control
